

TransLogic™ to Showcase Consultative Approach at New ASHE Conference

BROOMFIELD, Colo. (July 16, 2024) - [TransLogic™](#), a [Swisslog Healthcare](#) company and a leading supplier in transport automation, will showcase its healthcare consultative approach at the [Health Care Facilities Innovation Conference 2024](#). This flagship event is building upon the legacy of the long-running ASHE Annual Conference to meet the unique and evolving needs of professionals dedicated to optimizing healthcare facilities.

TransLogic will participate in the events at the Exhibition Hall July 21 - July 24, 2024, at booth #676. Professionals who are dedicated to ensuring that healthcare facilities are the most efficient and innovative are invited to explore the advantages of the [Design Assist](#) service as well as IT security related to TransLogic pneumatic tube systems. This approach brings transport experts into the early stages of building design, fostering collaboration that enhances overall project efficiency and ensures long-term serviceability. It also proactively addresses pneumatic tube system security concerns by staying up-to-date with the most current version of the software which comes with IT Security provisions.

“Our differentiator is that we are end-to-end, starting at the very beginning of the planning and design process, compared to our competition, which does not,” said Adam Tappen, Sales Leader at TransLogic. “Exhibiting at this conference enables our experts to connect with hospital design teams and share their expertise and resources to provide a consultative approach that surrounds the patient's perspective and ensures the result is a long-term process built to last.”

Pneumatic tubes are used in hospitals and other healthcare facilities to quickly transport important materials, such as blood samples, medications, etc. TransLogic works with healthcare architecture and design firms to consult with the project team to ensure the tube system vision is considered. This includes creating 3D models, running simulations, and coordinating directly with architects, engineers, and owners to ensure the tube system design can meet space planning, performance, and serviceability needs.

More information about the design and construction of pneumatic tube systems in healthcare settings can be found at <https://www.translogic.com/>.

About TransLogic™:

TransLogic™, a Swisslog Healthcare Company, builds on its 100 years of operational technology expertise to reliably automate the delivery of critical items and leverage innovations which transcend industry standards in transport automation. TransLogic™ products are manufactured in the USA, resulting in nominal supply chain issues, fewer shipping delays, and quality controls which meet North America's standards. Learn more about TransLogic™ solutions at translogic.com.

About Swisslog Healthcare:

Swisslog Healthcare provides integrated medication supply chain solutions to hospitals and health systems to assist providers in treating patients across the continuum of care. Integrating transport and pharmacy automation, value-added services, and intelligent software, Swisslog Healthcare enables healthcare providers to respond to patients' needs quickly and with greater accuracy. The company minimizes many sources of operational waste, so providers achieve higher levels of productivity to impact the well-being of patients in positive ways.
