swisslog healthcare

AirTec is the only natively integrated automated transport system for pharmacies

AirTec is an automated transport solution designed to integrate with Swisslog Healthcare pharmacy robots. AirTec quickly and securely delivers medication packs from the robots to pharmacy counters.

AirTec's transport speed of 5m/s greatly outpaces the pace of manual couriers. The unique design allows pharmacy robots to be placed in remote areas of the building to free up space in commercial areas that may be reallocated to other revenue-generating activities or merchandise. Integrated with Swisslog Healthcare pharmacy robots, AirTec creates an efficient, timely solution for medication fulfillment.

AirTec adapts to each pharmacy setup

AirTec is a scalable solution for pharmacies. Connect up to four delivery points within a single facility through a flexible tube network suitable for installation visible to pharmacy patrons or constructed within the building infrastructure.
