TransLogic® 4-Inch NexSeal™

Pneumatic Tube System Carrier

Setting a new standard of carrier technology, the NexSeal pneumatic tube system carrier is the easiest-to-use leak-resistant carrier on the market.
Sealed Delivery in an Instant

New Leak-Resistant Carrier Sets New Standard

The only one-step closure, leak-resistant carrier on the market, Swisslog Healthcare’s new NexSeal carrier is designed with easy-to-use latches for effortless closure—providing faster turnaround times. Users simply close the carrier and the latches engage to activate the leak-resistant seal. The full-perimeter seal protects against accidental spills and the potential spread of pathogens or biohazards during the transport of liquids in the pneumatic tube system. NexSeal carriers can be used in 4-inch Swisslog Healthcare and other manufacturer pneumatic tube systems.

Features & Benefits

— The most advanced, easy to use, leak-resistant carrier on the market.
— Latches are designed to activate at closure and engage the seal. No additional steps or manipulation of latches are required.
— Durable, high-impact polycarbonate shell is based on industry and user-accepted design.
— Long-life DuraBand wearbands provide softer landing for sensitive items and better lift-off for heavier payloads.
— Quick and easy latching enhances user workflow/processes while improving efficiency.
— Available features include RFID tags and various color options.

NexSeal Application

- Leak-resistant seal aids in containment during the transport of liquids
- Radio Frequency Identification (RFID) tracking
- Color indicates department-specific use
- May be used in 4-inch TransLogic, Quantum and competitive systems

Based on Market-Proven Design

NexSeal Carriers are constructed of a clear polycarbonate body with easy-to-use latches, DuraBand® wearbands for better lift-off of heavier payloads, and a side-opening design that gives the user full access to the carrier interior.
Secondary Containment Materials

Swisslog Healthcare provides a comprehensive line of secondary containment materials for use in your pneumatic tube system carriers. These secondary containment materials, when utilized with a conscientious program of transport protocol, will ensure successful transport without incident.
