Nexus™ Technology Solutions for TransLogic®
Pneumatic Tube Systems

swisslog-healthcare.com/translogic
**Nexus™ Pneumatic Tube Station**

**User Benefits**

— Carrier queueing enables efficient user workflow

— Simplified and easy to access secure payloads

— Secure transactions support assures medication safety and traceability

— Quiet “patient-sensitive” operation

— Station touch screen enables:
  — Special carrier send function keys including secure, STAT, and slow send
  — Security controls limit access to authorized staff members
  — Full integration with Swisslog Healthcare chain-of-custody solutions

— Easy to clean surface (including carrier chambers) promotes infection control

— Designed to support quick station modernization with minimal disruption and downtime

— Station upgrades are handled by your trusted Swisslog Healthcare Field Service Engineer

**Nexus Station**

The Nexus station delivers efficiency by automating more of the user’s workflow than traditional stations. The queueing functionality removes carrier management bottlenecks for both send and receive operations.
Nexus™ Software

Nexus System Control Software for the TransLogic PTS is an enterprise-level logistics management solution. Nexus Software is designed for advanced transaction management and processing to meet the needs of the largest and most complex hospital pneumatic tube systems.

Benefits

— Full tracking and tracing of carriers
— User-friendly interface design
— System scheduling and power management capabilities to reduce facilities operating costs
— Ease of network integration through Ethernet connectivity and virtual server support
