Xpress™ Technology can multiply the performance of critical clinical and patient care departments

Handle peak hours and high delivery volumes with ease. Xpress technology for pneumatic tube systems quickly move materials between critical departments to deliver medications and specimens hospital staff needs.
Pneumatic tube systems play an essential role in efficient hospital workflows and total elapsed time compared to standard tube systems. Timely carrier transmissions allow clinicians and staff to **spend more time on patient care activities** and less time waiting on the system.

Hospitals that prioritize patient care and satisfaction rely on Xpress to achieve high throughput and fast turn-around times.

---

**Labor-Saving Efficiency**

Xpress runs on dedicated, high-speed infrastructure allowing users to send consecutive payloads without waiting on the tube system to free up.

---

**Shorter Turn-Around Times**

Minimizing repetitive tasks, caregivers have more time available for patients and related duties, leading to faster treatment times.

Using Xpress, pharmacy staff, laboratorians, and nurses dramatically shorten wait and total elapsed time associated with carrier movement.

---

**Space Saving Efficiency**

Because Xpress can process traffic more rapidly than traditional tube systems, a single station can take the place of several, conserving valuable wall and floor space in hallways and the pharmacy.

---

**Better Staff Utilization**

With Xpress, users experience continuous, fast workflows as they distribute critical payloads to departments in need. No time is wasted queuing up or staging loaded carriers while waiting for the tube system to ready.
“Xpress uses a dedicated lane in the tube system to create an “always on” operation for carriers traveling to or from highly active departments.”

Verifiable Deliveries

Carrier location and delivery verification is automated with the integrated tracking technology. Users can continue their work with confidence knowing a carrier was received at the intended PTS station. RFID allows empty carriers to be returned to a designated “home” destination.

Compared to standard TransLogic® pneumatic tube system wait and transaction times, Xpress users can experience:

- **40% decrease in total elapsed transaction time.**
- **80% decrease in wait time.**
Get a closer look at how our **Xpress Technology** delivers for time-starved staff working at hospitals with high patient volumes and facilities on dispersed hospital campuses.

**Swisslog Healthcare**

At Swisslog Healthcare, we strive to lead change for better care. At the core of this vision is a focus on improving workflows and reducing the time clinicians spend doing repetitive tasks—enabling more time to care for patients and residents. Our solutions and services extend across the continuum of care, including transport, medication and supply chain management for long-term care facilities, consolidated service centers, hospitals and health systems.
