TwinTec Pharmacy Robot

2 Ultra fast dispensing

The multiple ejection mechanisms of TwinTec enables the rapid and simultaneous dispensing of multiple items. This is made possible by gravity channels and the vertically movable conveyor belt ensures a low drop height and thus the integrity of the medication.

3 Mobile loading and radio scanner

Mobile loading allows you to perform loading procedures easily and helps you with loading operations. The radio scanner enables you to scan codes from a distance so stock can be refilled with the maximum efficiency. Accurately stored medication means you don't waste time searching and can focus on delivering better care.

4 LED location Indicator

Easily identify which drawer needs to be refilled thanks to the LED indicator system with an additional audio alert. Our reliable system minimizes errors and saves time – to maximize efficiency.

5 Vertical select system

Our moving conveyor belt system enables even the most fragile box to be moved safely. Automation uses upward and downward movements to carefully get items where they need to go, no matter where they have been loaded originally.

1 Modular system

The TwinTec with its 1,40 m or 2,80 m modules is configurable and adaptable (on the same line, on L on 2 lines…). Conveying technology keep things moving and can even dispense medication to counters in other rooms – or vertically using lift action. Adding automation to your workflow also ensures medication gets where it needs to via reliable chutes. Colors and position of slides can be customized to suit your pharmacy's set-up.

We deliver innovation in the field of pharmacy automation market that lead to holistic medication management solutions.

With decades of experience in hospital and pharmacy automation, we are a global industry leader for medication management solutions. We proudly count more than 800 installations in community pharmacies in Europe, in particular in France and Italy. Our long history of innovation in the pharmacy automation field allows us to offer a wide and reliable portfolio of solutions and integration technologies that increase efficiency and safety of operations in the pharmacy.
